

MANIPULATIVES™

INDEPENDENT FREE TIME

Enriching the care environment with self-accessed, **PURPOSEFUL ACTIVITY.**

Engaging the strengths of a Resident's existing functioning ...

Manipulatives provide self-accessed, purposeful activity to Residents who live with dementia.

Easily affixed to the wall in the care environment, Manipulatives are readily accessible to Residents on a 24/7 basis, requiring minimal demand on care-staff time.

Manipulatives are appropriately designed using Montessori principles to build functional capacity. By tapping into past interests and providing familiar themes, Manipulatives utilize a Resident's existing functioning to provide physical, cognitive, and social stimulation appropriate to the ability of the Resident. The activities are meaningful, purposeful and self-correcting. The graphic designs are familiar, aesthetically pleasing with intuitive prompting that have good contrast and logical progression.

Manipulatives do not replace structured recreational programs but are meant to augment and enrich the care environment with self-accessed purposeful activity.

Manipulatives facilitate a state of 'well-being', help to manage responsive behaviour, and improve the quality of life of a Resident living with dementia.
